

UAT Test Execution Report

Project: TourOps Platform

Date: June 6, 2026

Testing Type: Automated End-to-End (Role-Based Access Control)

Executive Summary:

Automated User Acceptance Testing (UAT) has been successfully executed across all 15 distinct user roles defined in the system. The Role-Based Access Control (RBAC) mechanisms have been verified for strict isolation, ensuring that features, dashboards, and sensitive actions are only accessible to authorized personnel. Zero critical security or access-bleeding issues were found.

1. Scope of Testing

The UAT automated bot verified the following user personas and dashboards:

- Administrator Portal:** super_admin, admin
- Staff Operations Portal:** country_manager, transport_manager
- Specialized Internal Staff:** city_manager, content_editor, flight_agent, tour_builder, travel_agent
- Supplier & Vendor Portal:** hotel_manager, guide_manager, sights_manager, airline_supplier, supplier
- Customer Storefront:** customer

2. Test Results by Category

Category / Role	Verified Features & Access	Status
Admin & Super Admin	Full read/write access to Tours, Departures, Bookings, Users, Reports, and System Settings.	PASSED
Customers	Access to public storefront, Tour browsing, "My Bookings" history, and Group Joining capabilities.	PASSED

Category / Role	Verified Features & Access	Status
	Restricted from all backend panels.	
Suppliers (Hotel, Airline, Guide, etc.)	Access restricted to Supplier Dashboard (/supplier). Verified that Hotel Managers can only create Hotel Rates, while Airline Suppliers only view assigned flight Tasks. No cross-vertical data bleeding.	PASSED
Core Operations (Country & Transport)	Access to Ops Dashboard (/ops). Verified workflow tracking and manifest management. Manual 'Create Booking' button successfully hidden from non-admins to prevent unauthorized data entry.	PASSED
Specialized Staff (City, Editor, Builder, etc.)	Access restricted to Generic Dashboard (/ops/role). Verified that each role can only View/Create/Edit Master Records specific to their domain (e.g., Tour Builders strictly manage Itineraries).	PASSED

3. Key Validation Highlights

- **Button Visibility Restrictions:** Actions such as "Create Booking", "Create Assignment", and "Create Invoice" are fully restricted to `admin` and `super_admin` via conditional UI rendering.
- **Dashboard Segregation:** Any attempt to navigate to a restricted URL (e.g., a Supplier accessing `/admin`) gracefully redirects the user to their designated dashboard.
- **Data Isolation:** Supplier Rates and Specialized Master Records filter correctly based on the user's explicit role assignment.
